

**AMENDMENTS TO THE ABSTRACT**

Please substitute the following paragraph for the abstract now appearing in the English translation of the PCT application:

Roller members (30) of a constant velocity universal joint (10) are externally fitted to trunnions (~~26a to 26e~~) with a plurality of needle bearings (28) interposed between the roller members (30) and the trunnions (~~26a to 26e~~). The roller member (30) has an inner diameter portion having an L-shaped cross section by a flange section (40) which protrudes radially inwardly and an annular recess section (42) which is provided and defined by a gap with respect to the trunnion (~~26a to 26e~~). The plurality of needle bearings (28) are retained on the inner diameter portion of the roller member (30) by paste wax.
